Emerita Reports Latest Drill Results From IBW and Extends Mineralization 100 Metres to East at Romanera

Emerita Resources reports the latest assay results from the ongoing 2022 exploration drilling at its polymetallic Iberian Belt West (IBW) project located in Spain. IBW hosts three previously identified massive sulphide deposits: La Infanta, La Romanera and El Cura. Drilling continues with one drill at La Infanta and the remaining seven rigs at Romanera. Emerita's 2022 drill program focus has shifted to delineating the Romanera deposit, which is the largest deposit on the project.

Understanding Diamonds: The Historical Importance Of Geochemistry

Understanding Diamonds The Importance Of Geochemistry

The search for diamonds in Canada can be an arduous journey, particularly with the harsh conditions that come with exploration in Canada's far north. Geologists must first know where to look – i.e. they need to know what would suggest the presence of diamonds.
